Fibrous is a multi-chain DEX aggregator.

For every trade, Fibrous scans the liquidity on a network, splits the order across venues and routes for the best executable price, and settles it in one transaction. It is non-custodial: people trade from their own wallets. Fibrous has no native token.

Example route · Base · 1 ETH → USDC · Fibrous API, 5 Nov 2026 · not live data

In figures · as of November 2026

Products

App	Swap, Batch and Limit orders, plus Predict (outcome markets on Hyperliquid), a points leaderboard, Starknet staking and Fibrous AI, a plain-language command bar.
API and SDK	Routing for wallets, dApps and chains: a quote and ready-to-execute calldata in one request.
Solver	Intent-based execution for same-chain actions.
FibX	A CLI and an MCP server that let AI agents quote, swap and transfer on Base, HyperEVM and Monad, with Aave V3 on Base.

Networks

Starknet, Base, HyperEVM and Monad. Fibrous routes within each network and does not bridge between them.

Fees

App swaps	0.02% on a single route, 0.15% on multiple routes, plus network gas.
API and SDK	Fibrous adds no fee to API and SDK swaps.
